

Contents

1 Introduction	1
Aims	1
Objectives	1
Outline	1
Subject guide structure	2
Reading	2
Further support	3
About this volume	3
 2 Databases – basic concepts	 5
Reading	5
Introduction	5
Informal introduction	5
File based systems	7
Database and database management systems	9
The three level ANSI/SPARC architecture of a database environment	10
Schemas and mappings	13
The components of a database environment	15
Data	16
Hardware	16
Software	17
DMBSs and database languages	19
People	20
Advantages and disadvantages of database systems	21
Architectures of database systems	22
Data models	24
Learning outcomes	25
References	26
 3 The relational model and relational DBMSs	 27
Reading	27
The relational model – generalities	27
Relational DBMSs	30
Relational data objects – domains and relations	31
Terminology	31
Domains	31
Relations	33
Data definition in a relational DBMS	37
The data dictionary	38
Relational operators	39
“Set specific” relational algebra operators	40
“Relational specific” relational algebra operators	41
Examples	46
Data manipulation and the optimiser	47
Relational data integrity	49
Candidate keys	50
Foreign keys	51
Nulls	52
Domains and normal forms	53
Integrity constraints definition and foreign key rules	55
Conclusions	58
Learning outcomes	58
References	58

4 SQL	59
Reading	59
Introduction	59
SQL's DDL	61
Domains	61
Base relations	64
SQL's DML	67
Retrieving operations	67
Updating operations	75
Integrity constraints	77
Views	79
Advantages	80
Retrieving data	81
Updating data	82
Conclusions	83
Learning outcomes	84
References	84
5 Designing relational database systems	85
Reading	85
Introduction	85
Conceptual modelling – the Entity/Relationship (E/R) model	88
Generalities	88
The concepts of the E/R model	89
Entities	89
Properties / attributes	90
Relationships	91
Constraints on relationships	93
Type hierarchies	95
Possible flaws	96
Concluding remarks	98
Transforming an E/R model into a relational model	100
From E/R to a relational model	100
Transforming an E/R model	104
Normalisation – from 1NF to BCNF	107
Update anomalies	107
Functional dependencies	108
1NF, 2NF, 3NF and BCNF	110
First normal form	111
Second normal form	112
Non-loss decomposition	112
Third normal form	114
Dependency preservation	116
Boyce-Codd normal form	117
Concluding remarks	119
Further normalisation – 4NF and 5NF	119
Fourth normal form	119
Fifth normal form	121
Worked example	124
Learning outcomes	124
References	124
